

Key Issue

Night Training

Camp Grayling Community Council

WHAT

Night Training is distinguished from daytime combat with lower visibility, heightened audibility, and relation to many people's sleep schedules/circadian rhythm. Effective Night Training exploits the effects to seek advantages within the mission.

All night training is done under the United States Army Safety Program outlined in Army Regulation 385-10. The purpose is to prescribe policies, responsibilities, and procedures to protect and preserve personnel, citizens, and property against accidental loss. It provides public safety incumbent to Army operations and activities and healthful workplaces, procedures, and equipment.

WHY

Night Training is a vital component of military readiness for foreign and domestic threats. Night training offers a reduced ability to observe friendly troop movements, understand the terrain, and affect the perception of enemy movement and positions. Night training relies more on what can be heard than in daytime training.
